

Origami Ice Cream Cone

Diagrams by Mary Ellen Palmeri

I learned this model years ago from a Japanese origami magazine. Since I don't read Japanese I never learned the name of the designer. I love the model, and recently added a simple adjustment to create an 'alternate' cone shape. You need at least 2 squares (same size) - one for the cone and one for the ice cream.

THE CONE

1. Book-fold one way; crease lightly & unfold

2. Be sure to arrange your paper so the crease follows the drawing. Bring left corner over to meet the crease dot-to-dot

3. Fold right side so it is flush with the edge of last fold

4. Fold top point down

[Next drawing is enlarged]

5. Fold each side in as shown; top edges stay aligned with top & the creases end at level of folded point (dotted line)

6. Fold top edge down two times as shown, just enough to cover point of flap

7. Cone is done. Be sure to flatten top section well - it has to slide into a scoop of ice cream later!

THE ICE CREAM

1. Fold & unfold both diagonals

2. Fold top & bottom points to the center

3. Fold in half top to bottom

4. From the arrow bring upper right point down to bottom edge dot-to-dot and crease. (see next step for result)

5. Repeat step 4 with left point

6. Refine the shape with small folds on all four corners

7. Turn over...

8. One scoop completed! See how many scoops your cone can hold!

ALTERNATE CONE SHAPE

Fold bottom point to the back.

FINISHING

Slide top of cone into pocket of ice cream scoop
