

# Jumping Frog

*For best results use a business card - or card-stock cut to size: 3 1/2 x 2". Can also be made from 3x5" index cards, but jumping action isn't as strong. When you finish folding your frog, depending on how much of a 'snap' you activate it with, you might be able to get the frog to make a perfect flip in the air and land on its feet again ... try it!*

1. Fold top edge to the side, crease & unfold

2. Fold, crease & unfold top edge to other side creating an "X" in the card, then turn over...

3. Fold top edge down to meet the bottom of the "X", crease & unfold then turn over again

4. Collapse top into triangle shape by folding top down at the same time as pushing sides in (see next step for results)

5. Fold each side point up to top center point and crease well

6. Fold sides in to middle; crease well (the edges don't need to actually meet in the middle)

7. [Make this fold gently; do NOT crease sharply here] Fold bottom edge up to meet top point & press flat.

8. [This is also a gentle fold - NOT sharp] Fold top edge down to meet the bottom, again press flat rather than creasing sharply

9. Turn over and gently pull down front legs & stretch out back just enough to stand as shown in next step

10. To activate your frog, pet gently at arrow to move in small hops; for a big jump, press down at arrow & slide finger off with a 'snap'
